SmartVPSs

How do I modify DNS records?

Here's how to modify DNS records:

- With an email address that is associated with Brownrice hosting account login to our Dashboard:http://dashboard.brownrice.com
- Click **DNS**
- Select the domain you'd like to modify.
- Click the green **Manage DNS** button.
- Click the **Edit DNS Records** button.
- Make your changes.

Notes: Changes made here are immediately reflected in our DNS servers (ns1.brownrice.com and ns2.brownrice.com.) However, propagation may be slowed by DNS record TTL times, which are listed in seconds. TTL is the last field in each record above.
