

SmartVPSs

My Wordpress site is now live on Brownrice. How do I change the temporary URL to my URL?

If you've been using a temporary brownrice.com URL to build your site on our servers prior to it going live (e.g. yourwebsite.brownrice.com) you'll want to change that temporary address "yourwebsite.brownrice.com" to just be "yourwebsite.com." Here's how:

Via our Dashboard (easiest option)

- Login to <http://dashboard.brownrice.com>
- Click -> VPSs -> yourvps.com Manage -> Web Sites
- Find the web site you'd like to fix.
- **Click the small pencil icon** to the right of **Wordpress URL**.

The screenshot shows the dashboard for 'bridashboard.com'. It includes a navigation bar with a logo, a wrench icon, a folder icon, and a help icon. Below the navigation bar, there are several settings sections:

- PHP Version:** 7.3 (change)
- Aliases:** www.bridashboard.com bridashboard.brownrice.com
- Document Root:** /home/domains/bridashboard.com/public (edit) ?
- File Permissions:** Reset (fixes permissions) ?
- WordPress URL:** https://bridashboard.com (edit) ? ← (A red arrow points to this field)
- WordPress Version:** 6.2.2 is the current version. Well done!
- Plugins:** 1 out of 2 plugins out of date! +
- Themes:** All 3 themes are up to date! +

- Enter the live URL of the website (<https://yourwebsite.com>) and click the **Set** button
- Check your Wordpress site and ensure that its working correctly.
- Done.
-

Via Wordpress Directly (harder but better if you don't have dashboard access)

- **Login to Wordpress:** <http://yourwebsite.com/wp-login.php>

tly (harder but better if you don't have dashboard access)

- **Login to Wordpress:** <http://yourwebsite.com/wp-login.php>

SmartVPSs

- Click -> **Settings** -> **General**.
- Change both the Wordpress address and Site Address to read:
<https://yourwebsite.com>.
- Click **Save Changes**.
- Click **Permalinks**.
- Click **Save Changes** (yes, you don't actually change anything on the Permalinks page, you only click Save Changes.)
- Done.
