## How do I setup DNS?

### Here's how to add your domain to the Brownrice DNS servers:

- With an email address that is associated with Brownrice hosting account login to our Dashboard: <http://dashboard.brownrice.com>
- First navigate through the Dashboard, find the hosting service that is setup and note the IP address that we've assigned to it.
- Next click the **DNS** tab.
- Click the **Add DNS Domain Domain** button (blue button on right side of page)
- Enter your bare domain name (e.g. "mydomainname.com") and either select the correct IP address from the drop down list or manually enter it.
- Done.

Important: This will only work if the DNS server address associated with your domain name are pointed to: **ns1.brownrice.com** and **ns2.brownrice.com**

If Brownrice is your registrar you can set this in the **Domains** tab of the <http://dashboard.brownrice.com> by following [these instructions](#).

Unique solution ID: #1277
