Webcams

What is the embed code for my web cam?

Our web camera video player is a fully responsive HTML5 video player with a Flash fallback and is compatible with every modern browser and mobile device.

Notes:

- In the examples below you'll replace [STREAMNAME] with the camera name that we provided you when you signed up for service.
- If your site has trouble taking JavaScript code (Wordpress sites) use the iframe player code in Example 2.
- You can also login to https://dashboard.brownrice.com then navigate to Streaming -> [STREAMNAME] Manage -> Show Embed Code to pick up your exact embed code.

JavaScript Player:

```
<script id="bri_cam_1" class="bri_embed" src="https://player.brownrice.com?sn=STREAMNAME&em=1"></script>
```

iFrame Player (use for Wordpress and CMSs that don't allow JavaScript):

```
<iframe src="https://player.brownrice.com/embed/STREAMNAME height="100%" width="100%" allowfullscreen mozallowfullscreen></iframe>
```

List of Camera Options, all controlled by logging into
https://dashboard.brownrice.com

- Remove and/or replace video overlay logo with your own.
- Hide the white box PTZ controller area below the web cam video player.
- Set AutoStart/AutoPlay to on or off.
- Set Video Timeout duration (default is 10 minutes)
- Enable email alerts when our servers can't reach your camera.
- Set custom player aspect ratios. Default is 16:9.
- Restrick playback URL's to only web sites that you approve.
